(Enter building "A" from the Strand, Safra Lecture Theatre is in building "B")

Michele de Nevers explains the very latest developments in the scientific and political debates over climate change, and explores the ethical implications of the changing global environment for people in both rich and poor countries.

Michele de Nevers manages programs on climate change and a wide range of other environmental topics. The Environment Department is active in areas such as climate change mitigation and adaptation, biodiversity, land use, forestry, pollution control and abatement and environmental analysis. She joined the World Bank Group in 1981 and worked on industrial development programs in the South Asia region before moving to work in the finance complex on country risk issues. From 1991–1996 she worked on environmental programs in Latin America, and was the first coordinator for the Global Environment Facility there. Between 1996 and 2000 she was Sector Manager for environment in the Europe and Central Asia Region. From 2000–2008 she worked as a Manager and Director in the World Bank Institute on environment and capacity development. She was instrumental in launching the World Bank's greening and corporate social and environmental reporting initiatives.

The event is free, unticketed, and open to all.

Questions and comments from the audience will be welcomed.
