Overview of Work Packages

Retrospective analysis
- RRU database goals analysis for measurement items.
- Identification of therapy intervention recording tool areas and index structure

Systematic review
- Identify current standardised measures of lower limb passive and active function
- Identify existing items

Patient advisory group (PAG)
- Generating measurement items and commenting on index structure

Modified Delphi
1. Identification of questions to be presented in the Delphi with assistance from the PAG
2. Formation of the expert group
3. Online group ranking of items
4. On-line consultation with ranking of items (repeat round if required). Involving Delphi group and PAG

Pilot testing of measure and index

Psychometric evaluation of LAS
- Validity and dimensionality
- Ordinal scaling
- Reliability
- Responsiveness to change
- Feasibility

Work Package 1
Evidence Synthesis

Work Package 2
Measure Development

Work Package 3
Evaluation
