The Battle of Chancellorsville
May 2, 1863
May 3, 1863
May 4, 1863
Jackson's flanking march
Click for more information.
April 27 - 30
Hooker splits his army and tries to "double envelop" Lee with two forces, one approaching from the north by way of Chancellorsville and the other from the east at Fredericksburg.
April 30
Lee splits his army, sending Jubal Early to hold off Sedgwick at Fredericksburg and moving the rest of his force west to engage Hooker at Chancellorsville.
May 2, 7:30 a.m.
Lee splits his army again, sending Jackson's Second Corps on a 12-mile, 10-hour flanking march around the Union positions around Chancellorsville and the Wilderness

Mapping Notes and Nodes in Networks
Exploring potential relationships in biographical data and cultural networks in the creative industry in Amsterdam and Rome in the Early Modern Period.
- Colophon -
ECARTICO + HADRIANVS + SOTM
Cornelis Meijer
A dimension we cannot neglect is the analysis of the network as a whole, the so-called topology of the network - both because of its importance within the humanities and because our data lends itself perfectly for it. In particular we were interested in various clustering patterns of societies in hubs and in intermediary persons with few connections but linking various communities –weak ties- who were relevant for the transfer of knowledge from one network to another. This aspect was studied combining data from the cases of Cornelis Meijer and Cosimo III de Medici to do research on the intellectual and artistic organisations par excellence in early modern Italy: the Accademie. These institutions gathered those interested in a particular field and were hubs for dissemination and promotion of culture. A visualization of networks around them shows they were rather isolated groups. To display this network click on 'Social Visualisation'.
Despite their evident tendency to be secluded groups, these Accademie were connected thanks to weak links, people that functioned as bridges between them. An example of a weak link is Cornelis Meijer. Although not a weak link in the most strict sense of the term because he was acquainted with more than one member of the same society, he was positioned between popes, statesmen, intellectuals and artists. Meijer arrived in Rome in 1675 and in 1680 he was already made member of the Accademia Fisico-mathematica, the most important scientific society in Rome at the time. He made designs for making the river Tiber navigable in Rome and for constructions to prevent flooding in the neighbourhood of the Via Flaminia. Nowadays we would not reckon his engineering work to the creative industry, but he commissioned various Dutch and Flemish artists in Rome to make drawings and engravings after his designs.
Data from the correspondence of Cosimo III included references to objects, such as books, that circulated throughout networks and reveal new nodes. When visualizing Meijer's technical publications within this correspondence including dedicatees, engravers, printers and letters mentioning Meijer's work, new nodes of his networks are shown. To explore these click on 'Object Descriptions'.
