

Cardiovascular Magnetic Resonance

Feedback from delegates attending online course - November 2020

- Many thanks
- I will feel more confidence while spending time in CMR.
- Excellent course- Thank you very much.
- Excellent course! Thoroughly enjoyable. Well done on making the remote learning format work well!
- Excellent course and well organised. Thank you
- Great format
- It was adapted very good to the actual covid-situation. I would not change anything. Being able to review cases on personal computer was a lot of fun!
- Thank you all!
- It's great to get more than one example of a finding preferable imaged with good and suboptimal image quality and expert opinion on how to interpret.

Did you learn anything new and useful? If so, what.

- Answered many of my questions in certain clinical scenarios. Found the device session was very useful
- I LOVED all the clinical aspects and the case based discussions with the many varied spectrums of cases. The MRI safety was also v useful.
- It was a full of learning experience for someone like me who had a very brief CMR experience.
- I found cases review sessions very interesting and helpful.
- As a radiologist doing only congenital heart disease I saw a lots of new pathology. LGE-patterns useful.
- I learnt about the relevance of the sequences and the pathophysiological processes being demonstrated on T2W, T1 mapping, LGE etc. Definitely helps with understanding of interpretation of findings.
- I am a radiologist and am new to CMR so learnt a lot.
- Loved the coverage of pathologies and there appearance. Liked the ability to ask questions and the approachability of the way these were answered.

Feedback from delegates attending previous live courses

- Excellent overview and assessment. Great job Dr Chiribiri, Brilliant
- Great for level 1 course. AC is very enthusiastic about MRI – very inspiring!
- All lectures are well structured and rich in relevance to the lecture subject content.
- Very good, exceptional quality
- All lectures are well structured and rich in relevance to the lecture subject content.

- Very informative – covering a lot of the important CMR topics
- Thank you for a great course
- Good interactive
- Engaging speaker, made a potentially complex topic extremely interesting
- Level was great. Loads of new stuff learnt, too many to list
- Very in depth Level 1 course
- The level was just perfect in my opinion
- Just keep the course as it is, very good mix of case-training and theory
- Superb introduction to mapping and its clinical use
- I have learnt a lot from physics review to image acquisition tips and great pathology review which certainly can help me in the way I perform and conduct CMR studies
- Interesting to learn about the capabilities echo, about the vast number of cardiac disease processes and more Learnt about the importance of co-ordinating the use of different modalities to image patients
- Definitely for cardiologists, radiologists - it gives a real insight into the complexity of cardiac imaging
- Very good, answered a lot of questions I had
- Very helpful and practical advice
- Learnt lots of new stuff
- Excellent! Did what it said on the tin.
