

Example Research Dissertation Titles 2016

- Polygamy and self-esteem
- The brain at rest in psychosis proneness: a study using advanced resting state fMRI
- Predictors of relapse in the early stages of psychosis.
- Creativity and psychosis: a Swedish population study
- Exploration of Fluoxetine response in children and adolescents with depression with and without comorbid Autism Spectrum Disorder (ASD).
- N-Acetyl cysteine as a treatment for psychiatric disorders
- Effect of glutamate levels on resting-state perfusion in people with high schizotypy
- Reward network functioning in patients with schizophrenia - an fMRI study
- Vitamin D in First Episode Psychosis
- Practical experience of translational research in Psychiatry
- Effect of clozapine on regional cerebral blood flow in treatment resistant schizophrenia
- Creatine Kinase in Psychiatric Intensive Care Patients
- Narrative style and recovery from inpatient to community living in people with schizophrenia.
- A multimodal neuroimaging study of the effect of childhood trauma on amygdala activation and volume in psychosis proneness.
- Talking about emotions; developing novel measures of alexithymia for children
- The prevalence of common mental health disorders in male foreign national prisoners compared to local prisoners
- Effect of clozapine on GABA in treatment resistant schizophrenia
- Potential behavioural markers in infants at familial risk of Attention Deficit Hyperactivity Disorder (ADHD)
- A Telephone Based Observational Study to Examine the Role of Variation in the Glucocerebrosidase Gene on Disease Course in Lewy Body Disorders (OBSERV-GBA).
- Does response inhibition training reduce compulsive acquiring?

- Talking about emotions; developing novel measures of alexithymia for children
- Individual differences in the control of imitation and neuropsychiatric disorders
- Blood inflammatory markers in post partum psychosis (WCC, neutrophils and CRP) at admission and discharge after treatment from Mother and Baby Unit at Bethlem Hospital
- A post-trauma cognitive vaccine for the alleviation of Post-traumatic Stress Disorder symptomatology
- Ethnicity and the at-risk mental state
- A post-trauma cognitive vaccine for the alleviation of Posttraumatic Stress Disorder symptomatology
- Endocannabinoid system in psychosis- a pharmacological imaging investigation
- Target validation in psychiatric drug discovery
- Predictors of symptoms and outcome of CBT for individuals with psychosis/ bipolar disorder seen at the PICuP clinic
- Acceptability, Patterns of Use and Safety of Electronic Cigarettes in People with Mental Illness
- Does daily cognitive training with modafinil improve distal, untrained cognitive task performance more than cognitive training with placebo – an fMRI study
- Does brain glutamate reflect affective symptoms in people at Ultra High Risk of Psychosis?
- Co-morbidity and diagnostic shifts between bipolar disorders and personality disorders
- Appraisals of internal states: Associations with mood symptoms and mania risk (Bipolar Disorder) in adolescents
- Predicting psychosis onset with the use of multimodal neuroimaging in people at ultra-high risk for psychosis
- Co-morbidity and diagnostic shifts between bipolar disorders and personality disorders
